SUMMARY

Accomplished Full-Stack Developer and Senior Backend Engineer with over five years of experience creating and launching scalable web applications and serverless platforms. Skilled in TypeScript, Express.js, Nest.js, AWS Lambda, Terraform, and DevOps methodologies, with a track record of building energy-management microservices, leading trading platform development, and streamlining CI/CD pipelines on AWS. Possesses strong problem-solving abilities, emphasizing performance optimization and operational effectiveness.

EXPERIENCE

Senior Software Engineer

04/2025 - Present

Software Techies 

- Energy Platform:** Designed and operate a production serverless platform of 18 AWS Lambda microservices controlling and monitoring solar / home-energy installations for EVA (<https://www.evaportal.be/>) across 2 markets (Belgium and France).
- Automation:** Automated device control plus real-time monitoring of generation, storage, and consumption, optimizing energy flows against dynamic tariffs to raise self-consumption and cut grid usage during peak-price periods.
- Infrastructure:** Codified multi-environment AWS infrastructure with Terraform (Lambda, IAM, networking, monitoring), standardizing deployments and reducing manual provisioning errors across services.
- AI Tooling:** Built an AI log-analysis chatbot that surfaces incident signals from operational logs, cutting time spent on manual log review during production troubleshooting.

Senior Backend Engineer

07/2024 - 04/2025

ByDotPy 

- Leadership:** Led a development team to design and ship the Sabika Gold Trading Platform end to end (mobile + web).
- Backend Development:** Built high-availability Express.js / TypeScript APIs powering trading workflows with performance-focused service design.
- AWS Deployment:** Deployed production stack on AWS with ELB, CloudFront, and RDS to support reliable, globally cached delivery.
- DevOps Implementation:** Automated release pipelines with GitHub Actions (build → test → deploy) and managed DNS/subdomains for production environments, reducing manual release steps.
- Monitoring and Security:** Centralized logging and monitoring for faster error detection and operational visibility in production.

Full-Stack Developer

08/2022 - Present

Freelance 

- Designed and launched Rodod, a unified customer-conversation SaaS product covering intake-to-reply workflows in one platform (<https://tryrodod.com/>).
- Built an ERP invoicing system integrated with Egyptian Tax Authority e-invoicing & e-receipt APIs (<https://sdk.invoicing.eta.gov.eg/>), enabling compliant digital invoice submission.
- Delivered an Angular 16 operations dashboard and AWS-hosted backend for live invoicing use (<https://envoice-1949f.web.app>).

Senior Full-Stack Developer

01/2024 - 04/2024

Qannas 

- Delivered the Qannas operations dashboard full stack (NestJS, AdonisJS, Angular), improving day-to-day operational workflows with a responsive UI and tight API integration.
- Architected NestJS APIs for Qannas Community (Twitter-like social platform), enabling real-time interactions and higher engagement throughput.
- Improved system performance and reliability by ~30% through targeted optimization, refactoring, and security/scalability best practices.

Backend Developer

07/2023 - 06/2024

Shopx 

- Refactored and scaled the Lohanza e-commerce platform (NestJS, PostgreSQL, Prisma), launching a production-ready architecture in 2023 (<https://lohanza.com>).

- Launched 2 storefronts — professional Lohanza and SouqAlMoslimeen.com — expanding product coverage and go-to-market reach (<https://souqalmuslimeen.com>).
- Deployed both platforms on AWS for high availability, improving release reliability and delivery speed for production traffic.
- Integrated 2 payment gateways (Stripe + Paymob), enabling multi-provider checkout and higher payment completion flexibility.
- Built Shopx platform APIs covering customer management, shipment lifecycle, and traveler services to streamline multi-step operations in one backend.

backend developer

07/2022 - 06/2023

Shelter Investment Group [↗](#)

- Delivered 3 production NestJS systems: Licensing Essentials (traffic-violation inquiry/payment), a violations review microservice, and a winch driving platform (<https://www.amangroup-eg.com>).

Backend Developer

01/2022 - 06/2022

Smart Digital Service [↗](#)

- Built and enhanced microservices for an e-payment platform processing thousands of transactions daily with high availability and low latency.
- Delivered new supporting services and app features that extended core e-payment capabilities without disrupting live transaction throughput.

EDUCATION

Computer Science

09/2015 - 01/2020

Helwan University - Bachelor of Computer Science

SKILLS

Docker, GitHub Actions, Nginx	Advanced	PostgreSQL,Mysql,MongoDb, DynamoDB, InfluxDB	Intermediate
JavaScript/TypeScript,Nodejs	Expert	TypeORM, Prisma, Drizzle	Expert
Express.js ,Adonis.js and Nest.js	Advanced	AWS (EC2, S3, RDS, CloudFront, Lambda)	Advanced
Redis	Advanced	Terraform, Serverless	Advanced
Problem Solving	Expert	Linux	Advanced

LANGUAGES

English	Intermediate	Arabic	Native
